## **Introduction**

This chapter will be devoted to problem stating, need for the study, limitations, delimitations, objective of the study and definition of terms: the most common dissertation structure.

## **Literature review**

The main goal of aviation safety literature review is brief highlighting of existing studies and their achievements. Dissertation writer shouldn't just rephrase somebody else's ideas, but make literature analysis. Dissertation writing service strongly recommends you to focus your attention on publications from government agencies and not to take into account unverified sources. Keep in mind that aviation safety is tightly bound with damages, so don't forget to give damage estimation in your dissertation writing.

## **Methodology**

Aviation safety methodology chapter highlights significant incidences, frequency of aircraft accidents, preventive measures and predictions on how situation will develop. Methodology chapter can include summaries from airport reports listed in chronological order.

## Result

Results section in aviation dissertation writing is the most analytical part, despite of its shortness. Here you evaluate the efficiency of implemented methods, which were aimed to decrease aircraft accidents frequency.

## Summary

Dissertation summary gives a concise conclusion of the research work made and may also include recommendations paragraph. Dissertation writers should pay attention to the wording and proper style of summary chapter and avoid turning it into a statement of facts.

Also, aviation safety dissertation can be provided with the tables and graphs that summarize collected information from airport reports. For instance, you can make a table of annual damages or illustrate annual accident frequency with a graph.
